**Project Acronym:** SemanticHEALTH  
**Project Title:** Semantic Interoperability Deployment and Research Roadmap  
**Contract Number:** IST-27328-SSA  
**Starting date:** January 01, 2006  
**Ending date:** December 31, 2007

| Deliverable Number: | D 8.1  
|---------------------|----------  
| Title of the Deliverable: | Launch of the e-Health Semantic Interoperability web site  
| WP/Task related to Deliv.: | WP 8, Tasks 8.1, 8.2  
| Type: | Public  
| Authors: | Gyorgy Surjan, Pieter E. Zanstra

**Partners:**  
- Radboud University Nijmegen Medical Centre  
- World Health Organization  
- Egészségügyi Stratégiai Kutatóintézet - National Institute for Strategic Health Research  
- Uppsala Universitet  
- Universite Jean Monnet Saint Etienne  
- University College London  
- University of Manchester (subcontractor)  
- empirica Information & Communication Technology Research mbH

**Project Co-ordinator**  
**Organisation name:** Radboud University Nijmegen Medical Centre; Department of Medical Informatics  
**Name of representative:** Pieter E. Zanstra  
**Address:** 152 Medical Informatics, POB 9101, 6500 HB Nijmegen  
**Phone number:** +31-24-3 61 54 30  
**Fax number:** +31-24-3 61 35 04  
**E-mail:** p.zanstra@mi.umcn.nl  
**Project WEB site:** [http://www.semantichealth.org](http://www.semantichealth.org)
Realisation of WT 8.1: Establishment and management of a web presence

This task is about development of a comprehensive design of all aspects of a web presence. This includes issues of content closely aligned with the outcomes of WP 2 to 6. In the early phase of the project it means a simple web presence (within 3 months of project start). Its objectives are to promote the project and inform about its activities, and to link to related EC and global activities as early as possible.

Learning from some experience about sophisticated portals with overcomplicated functionality, we decided to choose simple solutions.

We provide file upload and download functions, secure connection and protected area for confidential documents, as well as public area. A simple mailing list appears however the most effective tool for daily communication between members.

Chronology:

Mailing list 2005 09
Zero version of the webpage 2006.01.31
Start of the webpage 2006.03.10
Start of the secure section 2006.03.22
Improved version 2006.03.29

Structure of the SemanticHealth website

Our intention was to create a transparent structure to help users to find the requested information. Practically all information is available just by two steps (two clicks) from the opening page. The opening page gives a total overview about the whole content if the site.

Opening page screen-shot
The Main menu on the left side of the screen makes possible to get all important pages by one click.

The public documents recently are arranged according to the various events, where the documents were presented and discussed with the audience. As the content of this part goes it will be necessary to provide subject or content based search facility to ease the navigation.

A special section of this part is the "request for comments" that contains documents for which we ask comments from experts from all over the world.
Participants, Workpackages, Delivireables

These pages give an overview of the project, and makes possible to follow the progress. Links to the home pages of the participating institutions helps to know more about the members of the project consortium.

Password protected area

It is used for internal purposes of the consortium. It contains documents that are under discussion, templates for new documents etc.

Design principles

Our aim is to use simple but nice looking design, more focus on content than on external formalities. A simple, easy to recognise logo was selected and used in all product of the consortium.

Webstatistics

A web based statistical analyser is available to demonstrate the usage of our website. The analyser runs since January 2007.
Future development according to WT 8.2:

Building a knowledge base about semantic interoperability

Based on the concepts developed and documents to be collected in the context of WPs 1 to 6, a comprehensive knowledge base on national, European and global semantic interoperability issues will be assembled and presented. Access and presentation structures should allow for retrieval from national, thematic and structural perspectives. Links with related other IST activities and global sources will be included.

Based on a well prepared dissemination plan, this task will furthermore support and assist all project participants, the research community as well as stakeholder groups in participating in dissemination activities, and on stimulating all involved in this support action process to contribute to the exploitation of the results achieved.
